

Strengthen your skin's natural defense

Skin regeneration with collagen products from Original Hanau

Every day our skin is exposed to environmental influences. And this causes our skin to age faster. Not only that, but as we get older our skin loses its suppleness and ability to regenerate – it develops wrinkles.

Collagen fibres, a very inelastic structure protein in our skin, ensure skin stability. In this rejuvenation process, special cells such as fibroblasts simulate increased collagen formation and the skin becomes more supple. The collagen light therapy from Original Hanau pushes the reconstruction of the collagen structure.

Due to its spectral characteristics, special “red” light can penetrate particularly deeply into the skin to where

the collagen and elastin fibres are. Blood circulation and metabolism are stimulated, and the regeneration is promoted. The skin appears refreshed and smooth, it revitalizes.

HN sunlight collagen tubes emit soft modulated red light at wavelengths from 590-640nm. This means that they give an intensive supply of just the right “red” radiation that stimulates the collagen and encourages skin regeneration.

Red light smooths wrinkles

Collagen tubes from Original Hanau emit light in the wavelength range 590-640 nm. This special red light and the adjacent infrared range have the properties needed to reach the collagen layer. Collagen and elastin are found in the dermis at depths between 0.3 mm and 3.5 mm.

Collagen light therapy is applied in cosmetic. A continuous treatment with red light stimulates a positive change of the skin and strengthens the flexibility of the connective tissue.

Initial irradiation treatment should be 2x weekly and

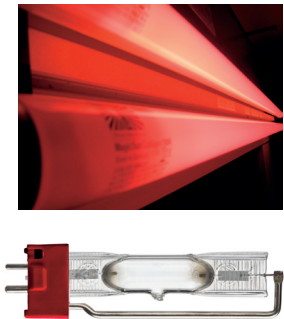

15 – 20 minutes depending on the output of the tubes. Recommended treatment duration should be at least 8 – 10 weeks. The improved cell regeneration makes the skin look better, refreshed and smooth; eye bags are reduced.

Optimized collagen tubes and lamps

The optimized product range of collagen tubes and lamps from Original Hanau make an individual adaption of the collagen bed possible.

Röhrentyp - Magic Sun	Identnummer	Nennleistung / (W)	Einbaulänge / (mm)	Nutzlebensdauer / (h)
